Site Address: 36608 500th Ln. Palisade MN 56469

PID: 35-0-015201

Comments: **Mound design may not follow Aitkin co. Auto fill form for mound design.**

- 1 This is a type I mound for a 2 bedroom House. Existing deep well location is SE of House.
- 2 Owner marked East property line, Designer staked mound East berm 4 ft from owner marked property line. Looking on Aitkin Co. GIS Map the East property line runs straight north from lake not NW like owner thinks.
- 3 Existing deep well is Approx. 20' ft SE of house. + 100' ft to mound and + 50' to tanks.
Existing septic and pump tanks to be pumped, collapsed, filled or removed.
Existing pressure bed to be abandon, West berm toe will be over pressure bed approx.. 5 ft.
- 4 Bench Mark Elevation = 100', is a nail on a tree near SE corner of mound area.
- 5 Install Jacobson 1650 Compartment tank for gravity flow from house (connect to existing pipe.)
- 6 Elevation contour of rock bed upslope edge is 98.5'.
The area size of the rock bed is 10' x 25' . Absorption area is 25' x 32.4'.
Sand absorption area is 8.6 ft. up slope + 10 ft. rockbed + 13.8 downslope = approx. 32.4 ft. wide sand base.
Berms are 12ft. Upslope, 19ft. Down slope, 10ft. Rock bed = approx. 41ft. Wide.
Overall mound size is approx. 41' wide x 57' long and approx. 3.5' high. End berms are 16 ft wide.
- 7 The bench mark is the nail on the tree near mound area, BM = Elv. 100'.
Installer to double check bench mark. Installer should confirm bench mark and sand height Elv. with inspector.
Installer should record bench mark Elv. and sand height on installation inspection form.
- 8 The top of the washed sand and bottom of rock bed is Elv. 100'.
It is important that the soils do not get compacted, and that clean washed sand is used.
- 9 The Jacobson 1650 compartment tank will be gravity flow from dwelling. Install the pump for 7 demand doses per day. approx. 63 gallons per dose, 5 inches of tank level. Install alarm at 3 inches from pump on level.
Install all manholes, inspection pipes and clean-outs to grade or above, insulate top of tank if less than 2 ft of cover soil.
Install a 2" supply pipe from tank to end manifold in rock bed, install so pipe drains back to tank.
Install 1.5" laterals with 9" of rock under them. (Install Lateral clean-outs at far end of laterals. Recommended)
Drill 1/4" holes for Perf sizing, 36" on centers.
Install 4 " inspection pipe to bottom of rock bed, secure in rock bed and raise to above final grade.

Designed to Aitkin Co. and MPCA recommendations and requirements.
