Mound Design Notes - Aitkin county

Comments: ***Mound design may not follow Aitkin co. Auto fill form for mound design.***

1 This is a type I mound for a 3 bedroom House. Proposed deep well location will be SE of House.
House will be walk-out with a lift in the basement.

2 Alternate site to the west of mound area established in 2007.

3 Contractor and installer may want to install septic tank inlet at or above existing grade because of the amount of backfill between garage and mound area.

4 Bench Mark Elevation is a nail on a Oak tree West of mound area.
Mound area is at 15% slope, 2 perk tests completed in rockbed area. 9-MPI is perk rate.

5 Install Jacobson 1650 2/Compartment septic tank for gravity flow from main floor of house (Elv. not set)
Order with side inlet, Designer use Jacobson tanks for calculations, installer may use other MFG.
Installer to be aware of bury depth of tanks, septic and pump.
Install clean-out near house.

6 Elevation contour of rock bed upslope edge is 98.5'.
The area size of the rock bed is 10' x 38' . Absorption area is 38' x 54.5'.

2 Sand absorption area is 6.2 ft. up slope + 10 ft. rockbed + 38.3 downslope = approx. 54.5 ft. wide sand base.

Berms are 9ft. Upslope, 48ft. Down slope, 10ft. Rock bed = approx. 67ft. Wide.
Overall mound size is approx. 67' wide x 78' long and approx. 3.5' high. End Berms are 20 ft wide

7 The bench mark is the nail on the tree near mound area, BM = Elv. 100'.
Installer to double check bench mark. Installer should confirm bench mark and sand height Elv. with inspector.
Installer should record bench mark Elv. and sand height on installation inspection form.

8 The top of the washed sand and bottom of rock bed is Elv. 100'.
It is important that the soils do not get compacted, and that clean washed sand is used.

9 Install Jacobson 520 pump tank with gravity flow from septic tank . Install the pump for 7 demand doses per day. approx. 71 gallons per dose, 4.3 inches of tank level. Install alarm at 3 inches from pump on level.
Install all manholes, inspection pipes and clean-outs to grade or above, insulate top of tank.

10 Install Effluent filter on septic tank outlet, install electric alarm on filter. (Recommended)
Install a 2" supply pipe from tank to end manifold in rock bed, install so pipe drains back to tank.
Install 1.5" laterals with 9" of rock under them. (Install Lateral clean-outs at far end of laterals. Recommended)

11 **Drill 1/4" holes for Perf sizing, 36" on centers.**
Install 4" inspection pipe to bottom of rock bed, secure in rock bed and raise to above final grade.

Designed to Aitkin Co. and MPCA recommendations and requirements.
