Pete --

I reviewed various aerial photos, the wetland layer, the soils layer, and contours. I also checked the assessor's photos for Quady's lots and the north and south lots that are developed and don't see any wetland indicators. There is a depression on Parcel 08-1-066300, which could be wetland, but it would not be impacted by the proposed lot split.

Can you take a quick peak at this one, any wetland issues?
